

Design

Networking and meeting new people is very important both professionally and personally. Problem is, I am not a big social media user; I rarely use Twitter and I don't use Instagram etc. Therefore I want to create a personal webpage that I can give to people if they would like to know me better and possibly contact me in the future.

User Personas

- Aaron the website owner
- Stan the visitor/ new contact

User Stories

- As the website owner, Aaron would like to give a brief introduction (about me section and hobbies) to people visiting his page so that they can learn more about him as well as list education and work experiences for possible recruiters. Aaron would also like to provide contact information so that people can get in contact with him.
- As a website visitor, Stan wants to be able to learn more about Aaron. More specifically, Stan would like to learn about what is Aaron currently doing, what is his educational background and what are his personal interests (such as hobbies). More importantly, Stan would like to be able to have Aaron's contact information if he wants to get in contact.

Design mockups
